Sources: BEA NIPA bulk data; business-sector share from github.com/IlanStrauss/business-profit-share (Gutiérrez–Piton method; business value added excludes agriculture, real estate, public administration, education, and health, and depreciation counts as profit).
GDI profit share uses Figure 3's definition: corporate profits without IVA/CCAdj plus 1/3 of proprietors' income. Trend = OLS slope of the annual share from 2000 to the last data year. Projections start from the smoothed last-year level (LOESS span 0.3). A mechanical scenario, not a forecast.
